Trusted GUI Test Automation

For most clients the choice of T-Plan followed a stringent selection process, across several providers, to choose a Test Automation tool that met their needs. The requirement was also to find a partner trusted to understand their challenges and provide support in achieving effective results.

Major Benefits

> **Cross-platform functionality**
A highly influential factor in their selection of T-Plan is the ability to test across all platforms - iOS; Android; Desktop (macOS, Linux, Windows). Unlike tools from other providers which are browser or platform-specific, this functionality enables test teams to write one script and then automate each step of testing, with limited interaction and has the added benefit of reducing set-up and repeat testing time. Some clients found cross-platform functionality led to reduced timings of up to 50% and enabled 24/7 testing, removing the requirement for an engineer to carry out the work.

> **Testing the Customer Experience**
Having a consistent UI across multiple platforms, and enabling in-situ testing, ensures that test teams benefit from live UI testing, seeing the interface in the way that the end-user experiences it. Record and Playback features provide the ability to capture and repeat test scenarios. This valuable insight into the customer experience ensures that developers create an intuitive interface and the best possible user experience.

> **Hands-on support**
Clients tell us that the support they get from the T-Plan team is invaluable, with a combination of excellent technical knowledge, and a willingness to help, 24/7. We know that an understanding and adaptable approach to finding solutions is essential for GUI Test Automation to meet new needs.

> **Simple to use**
T-Plan Robot is a quick start, intuitive automation tool. Support, training aids and workshops enable members of large test teams to quickly pick it up and run with it, with no requirement for modification to meet client needs.

> **Competitive pricing**
We provide cost savings via a combination of our licence fee structure and the cross-platform functionality that delivers incredible time savings for developers.

Listening to our clients is essential to us. Their feedback is invaluable in ensuring that we continue to innovate and provide market-leading products and the service levels that our clients require. T-Plan, a small company with a big impact.
